### Göbel at the HIGH END 2008 show in Munich

On the occasion of HIGH END 2008, Göbel Audio presents the new wall loudspeaker series „Modul“ - a flat panel loudspeaker system that has been awarded by the Bavarian ministry of economics with the research prize for future-oriented technology.

With every high-end loudspeaker series produced by this German specialist workshop near Munich, the heart of this loudspeaker system remains the patented Göbel bending-wave speaker, with its nine-layered wooden membrane and precisely lasercut incisions. Therefore it is not surprising that this plain wall loudspeaker „Modul Wall“ satisfies, despite its modern design, with the expected precise sound reproduction of a Göbel loudspeaker.

For many years now, the founder and main developer, Oliver Göbel, is fascinated by the bending wave principle as it is the basic sound principle of most instruments. Within a research period of over seven years he developed a bending wave loudspeaker that, due to its incredible resolution and speed in particular, leaves all conventional loudspeakers in its shadow:

“....the living room is completely acoustically and atmospherically flooded, even the tiniest details are tangible in the room - and they remain there too, even if you leave the (already generous) ‘sweetspot’. An experience for true connoisseurs.” (Cai Brockmann, Image Hifi)

The bending wave loudspeaker „Modul Wall“ which covers a frequency range of 100 - 29.500 Hz is perfectly suited for wall recessing due to its small installation depth of 7cm. The conventional subwoofer „Modul Base“ is a bandpass with two impulse compensatingly set up 16 cm longthrow chassis. Both loudspeakers are available in brilliant black and brilliant white.

### NEW EDITION OF THE „DETAILLE“ SERIES

The Detaille series, which has been awarded with a prize for technology at the IHM 2006, comes in a new outfit: Apart from the brushed aluminium frame and the brilliant white or black finish, the Detaille series has been face-lifted with a new magnetic cover made from exclusive acoustic cloth.

In addition to this, the driving units of the bending wave loudspeakers Detaille S and Detaille C have been optimised which led to an even better performance in terms of resolution and speed.

### „LACORDE“ - CABLE SERIES EXTENDED

The Lacorde cable family has been extended with a top quality XLR-cable and comes with a new black braided sleeving. The connectors of the new XLR cable is furnished with the usual high-grade Neutrik® plugs.
